

Locally Plausible, Globally Wasteful: Supplementary Material

Anonymous submission

1 Evidence Scope

This supplement reports the prespecified diagnostics that support the compact main-paper results: the full parameter-sensitivity envelope, seed-level and task-family heterogeneity, exact supply-yoke manipulation checks, data-quality summaries, and provenance records. Per-seed values are descriptive heterogeneity evidence rather than independent confirmatory replications.

2 Sensitivity Envelope

Pending evidence. The formal sensitivity table is generated only after the unified evidence gate verifies all 27 pre-registered runs.

3 Seed-Level and Task-Family Heterogeneity

Pending evidence. Heterogeneity tables are generated only from complete frozen artifacts.

4 Exact Supply-Yoke Checks, Data Quality, and Provenance

Pending evidence. Diagnostic tables are generated only after the complete Epsilon, Zeta, and MiniWoB evidence suite passes the unified completeness gate.

5 Computing Environment

Table 1: Local execution environment for maze analysis and BrowserGym MiniWoB task execution. LLM inference used hosted model APIs; provider-side CPU/GPU models and memory were not exposed and therefore cannot be reported.

Item	Recorded value
Operating system	Windows-11-10.0.26200-SP0
CPU	Intel(R) Core(TM) i7-10870H CPU @ 2.20GHz
Logical CPU count	16
Installed memory	15.78 GiB
Python	3.12.12 (main, Feb 3 2026, 22:54:57) [MSC v.1944 64 bit (AMD64)]
Browser executable	C:\Program Files\Google\Chrome\Application\chrome.exe
Browser version	150.0.7871.115
MiniWoB++ commit	7fd85d71a4b60325c6585396ec4f48377d049838
Formal MiniWoB manifests	11
Registered MiniWoB tasks	189
Independent environments per task	4
Git revision	51e08dc115aba8339e85d0839ce05144130830f9
